PRACHI YADAV

Associate Product Manager | Product Management
Bengaluru, India | +91-8580189788 | y16prachi04@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Computer Science undergraduate (CGPA 8.6/10) with product experience across healthcare learning, EdTech, hiring and B2B services. Turns business requirements and user research into personas, journey maps, user flows and prioritized features, and has taken a product from problem definition to a live release. A technical foundation in web development enables close collaboration with engineering.

EDUCATION

PES Institute of Technology and Management, Shivamogga (VTU) **2023 – 2027**
B.E. Computer Science and Engineering | CGPA: 8.6/10

PROFESSIONAL EXPERIENCE

Waltcorp | *Product Designer* **Jun 2026**

- Translated business requirements for a multi-service B2B technology and consulting firm into the information architecture and user flows for waltcorp.io.
- Structured the prospective-client journey into four stages (Discover, Explore, Build Trust, Take Action) and prioritized content and calls to action around the question each stage must answer.
- Defined a reusable page framework applied across service lines, including Technical Product Management, Digital Commerce, Quantronics and M2M Studio, keeping the experience consistent while each business area adapts its content.

Edneuron | *UI/UX Designer* **Jun 2026 – Aug 2026**

- Conducted user research across four segments of a medical learning platform (clinical researchers, MBBS students, senior consultants, research authors) and built personas covering goals, needs and frustrations.
- Mapped four end-to-end user journeys, identifying faster specialty discovery, trust signals and progress visibility as key needs.
- Converted insights into one information architecture serving all four journeys: a shared discovery layer, a personal dashboard for saved content and CME credits, and a separate publishing path for authors.

Rampwork | *UI/UX Design Intern* **May 2026 – Jun 2026**

- Structured the company-side journey of a cross-border hiring platform connecting Indian tech talent with international companies into four steps: Discover, Explore, Evaluate, Hire.
- Organized talent discovery around scannable developer profiles, with clear process steps and calls to action for hiring companies.

Zidio Development | *UI/UX Design Intern* **Sep 2025 – Dec 2025**

- Translated product requirements for an EdTech platform into user-facing concepts that improved learning-content clarity.

PRODUCT MANAGEMENT PROJECTS

Vayu AQI | *Air quality forecasting and personal health alerts* Live | GitHub

- Problem: commuters in Indian cities see a single city-wide AQI number but cannot tell which route, departure time or pollution level is risky for their own health.
- Reframed the product around personal exposure instead of raw AQI: each trip is scored by estimated PM2.5 inhaled for the travel mode, comparing up to 3 routes and departure times from 1 hour earlier to 3 hours later.
- Suggested a change only when it cuts exposure by 12% or more, and set alert thresholds by health profile (asthma, heart disease, children, elderly).
- Made results easy to act on with India's CPCB scale, cigarette-equivalent exposure, plain-language explanations, Hindi and Kannada, and opt-in location; deployed as a React PWA with a FastAPI forecasting service, 50 automated tests and CI.

MentorConnect | *Mentorship platform for students and mentors* Live | GitHub

- Defined the product concept and requirements for one platform where mentees find a mentor, send a request, book 1:1 sessions, chat between sessions and leave reviews, with mentee, mentor and admin roles.
- Designed the UI and core user flows, and built the initial working prototype (PHP, MySQL) that set the feature scope for the production release on Next.js and PostgreSQL.
- Live version supports mentor search by skill, company and price, booking from live availability with no double booking, and reviews only from mentees who completed a session.

FraudNet-Synth | *Privacy-preserving fraud detection (team capstone, 4 members)* GitHub

- Problem: banks cannot pool transaction data to detect fraud, and small banks hold too few fraud cases. Solution: four simulated banks train one shared model with federated learning, exchanging only model weights.
- Owned the Bank B node: ran the first cross-device federated test with the team server (10 rounds, raw data never left the laptop) and presented the synthetic-data segment of the project demo.
- Outcome: federation matched pooled training on fraud F1 (0.796 vs 0.775) without sharing data and lifted the smallest bank most (+0.34 F1); synthetic data showed no reliable gain, reported openly as a finding.

SKILLS AND TOOLS

Product Strategy: Product Thinking, Product Discovery, Product Roadmapping, Feature Prioritization, Competitor Analysis
Product Execution: Product Requirements (PRD), User Stories, Acceptance Criteria, Agile Methodology, Sprint Planning
Research & Analysis: User Research, Personas, Journey Mapping, Market Research, Problem Identification, Data-driven Decisions
Design & Technical: User Flows, Information Architecture, Wireframing, Prototyping, HTML, CSS, JavaScript, PHP, MySQL
Tools: Jira, Figma, FigJam, Notion, Excel, Google Workspace, GitHub, Canva
